

Specification MOS/CV4006  
 Issue 1 Dated 25th June, 1957.  
 To be read in conjunction with K1001, BS448 and BS1409

Specification UNCLASSIFIED	SECURITY Valve
UNCLASSIFIED	UNCLASSIFIED

<b>TYPE OF VALVE</b> - Reliable, Low Noise, Low Microphony Amplifier Pentode		<b>MARKING</b>																																							
CATHODE - Indirectly Heated		See K1001/4																																							
ENVELOPE - Glass - unmetallised		<u>ADDITIONAL MARKING</u>																																							
PROTOTYPE - VX7081		6059																																							
RETMA Designation - 6059																																									
<b>RATING</b>		<b>BASE</b>																																							
All limiting values are absolute		See BS448/B9A/1a1

NOTES

1. The change in mutual conductance is expressed as:-

$$\frac{gm \text{ at } 6.3V - gm \text{ at } 5.7V}{gm \text{ at } 6.3V} \times 100 \%$$

2. Noise output measured at anode of V.U.T. Amplifier band-width 30 c/s - 13 Kc/s (3 db points)  
3. Ig, shall not be rising or out of limit after 10 minutes.
