# SYLVANIA RADIO AND TELEVISION TUBE CHARACTERISTICS CHART

## HOW TO USE THIS CHART

The types are listed in numerical and alphabetical order. The second column now lists the Bulb size or style of construction, whichever is most helpful in describing the type. Lock-in is, of course, well known, but the letters "T" and "ST" may need explaining. "T" means tubular bulb and "ST" is the dome topped bulb as now used in Type 6D6, 24, etc. The following number gives the nominal maximum diameter in eighths of inches. Subminiature types are marked T3, T2 or T1 depending on the bulb diameter.

Columns are included to show the type of emitter, (cathode or filament), and for interelectrode capacitances on those types having capacitance ratings. On converters the capacitances shown are respectively, Signal Grid to Plate; R-F Input; and Mixer Output. The capacitance values shown are for a shielded tube when the data are available, since this is the latest standard method. Except in the case of obsolete (or newly announced) types, more complete technical data may be found in the SYLVANIA Technical Manual.

The "Basing Diagram" column indicates the internal and external shield connections. For example, this column now shows the basing for Type 7A7 to be 8V-L-5. This means that the active elements are connected as shown in the base diagram 8V, and that the external shielding (in this case the Lock-in base) is connected to the lug (L) and the internal shield to pin 5. This avoids having a separate base diagram for types with a minor difference in shielding. The figures 0-0 indicate no external and no internal shielding respectively.

When replacing tubes in series string television receivers, attention should be given to the complete type number including the suffix. Prototypes should not be substituted for series string types.

Heater voltage, heater current and heater-cathode voltage ratings of the new series string tubes may, due to the requirements of such operation, differ widely from those of their prototypes. All the new series string types have controlled heater warm-up time for series string operation. In addition, heater current production tolerances have been tightened on all series string tubes to insure proper steady state voltage distribution. Two examples are shown in the following table.

	Series String Type 5AQ5	Proto-Type 6AQ5	Series String Type 6SN7GTB	Proto-Type 6SN7GTA
Series String Controlled Heater				
Warm-up Time.....	YES	NO	YES	NO
Heater Voltage.....	4.7	6.3	6.3	6.3
Heater Current (ma).....	600	450	600	600
Tolerance (ma).....	±25	±40	±25	±50
Heater-Cathode Voltage.....	200	200	200	200

It should be noted that the 5AQ5 and 6AQ5 differ in all characteristics shown except for heater cathode voltage. The 6SN7GTB and 6SN7GTA are identical except for heater current tolerance and controlled series string heater warm-up time. However, substitution of a 6SN7GTA in a series string receiver may, due to the absence of the controlled series string heater warm-up characteristic and wider heater current production tolerance, cause premature failure.

Series string types differ from their prototypes only in those characteristics necessary to insure dependable operation in series string television receivers. All other characteristics and ratings are identical to those of the prototypes.

## NOTICE

This chart contains the very latest radio and television tubes in addition to many out-of-date types. It is designed to be of maximum use to servicemen as a quick reference chart.

Please note that all types listed are not available from Sylvania. They are included for your reference in finding substitutes, etc. Consult our price list for types currently available.

The data published here have been compiled from various sources and while believed to be accurate, no responsibility can be assumed in case of error.

Mention or reference to patented circuits does not constitute permission for their use. The license agreement under which Sylvania tubes are sold is enclosed in the tube carton.

(1) Values are given shielded unless marked with (\*). (3) Has special mechanical and/or life characteristics.  
 (2) Converter tube capacitances given are signal grid to plate; RF Input, Mixer Output. (4) Average Contact potential bias developed across specified grid resistor.  
 † Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

‡ Per Tube or Section. § Plate and Target Supply Voltage. ¶ Applied through 20,000 ohms.  
 † Maximum Signal. ‡ Triode Operation. †† Conversion Transconductance. ‡‡ Plate to Plate.  
 ‡‡ Triode Operation. ‡‡ Approximate. ‡‡ maximum. ‡‡ Cathode Resistor (ohms).

SYMBOLS FOR BASE DIAGRAMS: Dp—Diode Plate; F—Filament; Fc—Filament Center; G—Grids numbered according to their position from the cathode; H—Heater; Hc—Heater Center; Ht—Heater Tap; IC—Internal Connection, DO NOT USE, J—Jumper; K—Cathode; NC—No Connection; P—Plate; Rc—Ray Control; S—Metal Shell; SA—Starter Anode; T—Target; XS—External Shield; □—Top Cap; ■—Locating Key.

(1) Values are given shielded unless marked with (\*). (3) Has special mechanical and/or life characteristics.  
(2) Converter tube capacitances given are signal grid to plate; RF Input, Mixer Output. (4) Average Contact potential bias developed across specified grid resistor.  
X Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

# Per Tube or Section.  
\$ Plate and Target Supply Voltage.  
† Maximum Signal.

□ Applied through 20,000 ohms.  
▲ Conversion Transconductance.  
\*\* Triode Operation.

‡ Plate to Plate.  
♦ Approximate.

m maximum.  
■ Cathode Resistor (ohms).

SYMBOLS FOR BASE DIAGRAMS: Dp—Diode Plate; F—Filament; Fc—Filament Center; G—Grids numbered according to their position from the cathode; H—Heater; Hc—Heater Center, Ht—Heater Tap; IC—Internal Connection, DO NOT USE, J—Jumper; K—Cathode; NC—No Connection; P—Plate; Rc—Ray Control; S—Metal Shell; SA—Starter Anode; T—Target; XS—External Shield; □—Top Cap; ■—Locating Key.

(1) Values are given shielded unless marked with (\*). (2) Converter tube capacitances given are signal grid to plate; RF Input, Mixer Output. (3) Has special mechanical and/or life characteristics. (4) Average contact potential bias developed across specified grid resistor. I Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

Per Tube or Section. § Plate and Target Supply Voltage. † Maximum Signal. □ Applied through 20,000 ohms. ▲ Conversion Transconductance. \*\* Triode Operation. †† Plate to Plate. ‡ Approximate. m maximum. ■ Cathode Resistor (ohms).

SYMBOLS FOR BASE DIAGRAMS: Dp—Diode Plate; F—Filament; Fc—Filament Center; G—Grids numbered according to their position from the cathode; H—Heater; Hc—Heater Center; Ht—Heater Tap; IC—Internal Connection, DO NOT USE, J—Jumper; K—Cathode; NC—No Connection; P—Plate; Rc—Ray Control; S—Metal Shell; SA—Starter Anode; T—Target; XS—External Shield; □—Top Cap; ■—Locating Key.

(1) Values are given shielded unless marked with (\*). (2) Converter tube capacitances given are signal grid to plate, RF Input, Mixer Output. (3) Has special mechanical and/or life characteristics. (4) Average Contact potential bias developed across specified grid resistor. X Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

# Per Tube or Section. † Plate and Target Supply Voltage. ‡ Maximum Signal.

□ Applied through 20,000 ohms. ▲ Conversion Transconductance. \*\* Triode Operation.

†† Plate to Plate. ‡‡ Approximate. <sup>m</sup> maximum. <sup>■</sup> Cathode Resistor (ohms).

SYMBOLS FOR BASE DIAGRAMS: Dp—Diode Plate; F—Filament; Fc—Filament Center; G—Grids numbered according to their position from the cathode; H—Heater; Hc—Heater Center; Ht—Heater Tap; IC—Internal Connection. DO NOT USE, J—Jumper, K—Cathode, NC—No Connection, P—Plate, Rc—Ray Control, S—Metal Shell, SA—Starter Anode, T—Target, XS—External Shield, □—Top Cap, ■—Locating Key.

(1) Values are given shielded unless marked with (\*). (3) Has special mechanical and/or life characteristics. # Par Tube or Section. □ Applied through 20,000 ohms.  
 (2) Converter tube capacitances given are signal grid to plate; RF Input, Mixer Output. (4) Average Contact potential bias developed across specified grid resistor. † Maximum Signal. †† Plate to Plate.  
 ‡ Conversion Transconductance. ††† Approximate.  
 †††† Cathode Resistor (ohms).  
 ††††† m maximum.

SYMBOLS FOR BASE DIAGRAMS: Dp—Diode Plate; F—Filament; Fc—Filament Center; G—Grids numbered according to their position from the cathode; H—Heater; Hc—Heater Center; Ht—Heater Tap; IC—Internal Connection. DO NOT USE, J—Jumper; K—Cathode; NC—No Connection; P—Plate; Rc—Ray Control; S—Metal Shell; SA—Starter Anode; T—Target; XS—External Shield; □—Top Cap; ■—Locating Key.

(1) Values are given shielded unless marked with (\*). (3) Has special mechanical and/or life characteristics. (4) Average Contact potential bias developed across specified grid resistor.

(2) Converter tube capacitances given are signal grid to plate; RF Input, Mixer Output.

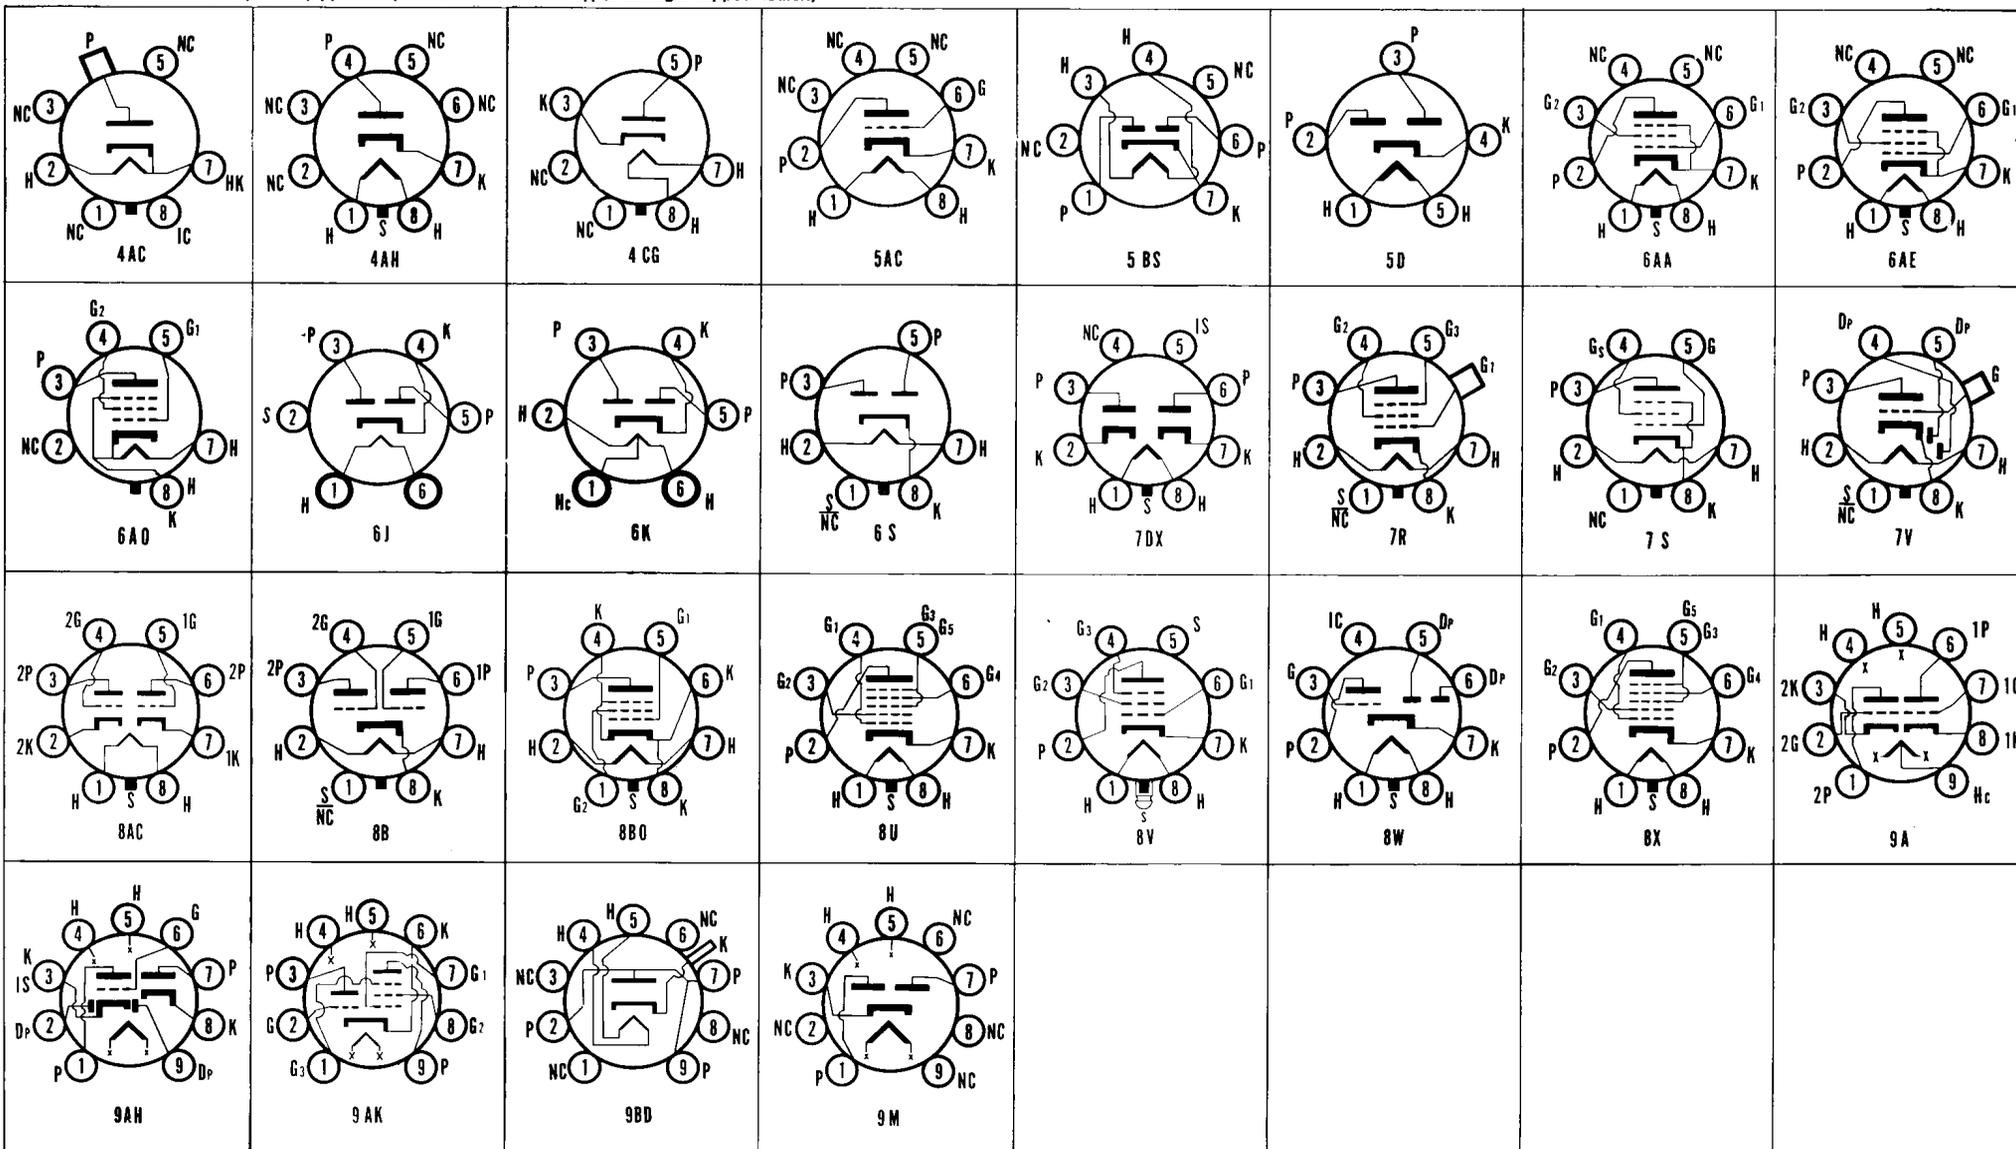

X Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

† Per Tube or Section.  
‡ Plate and Target Supply Voltage.  
§ Maximum Signal.

□ Applied through 20,000 ohms.  
▲ Conversion Transconductance.  
\*\* Triode Operation.

¶ Plate to Plate.  
♦ Approximate.

m maximum.  
■ Cathode Resistor (ohms).

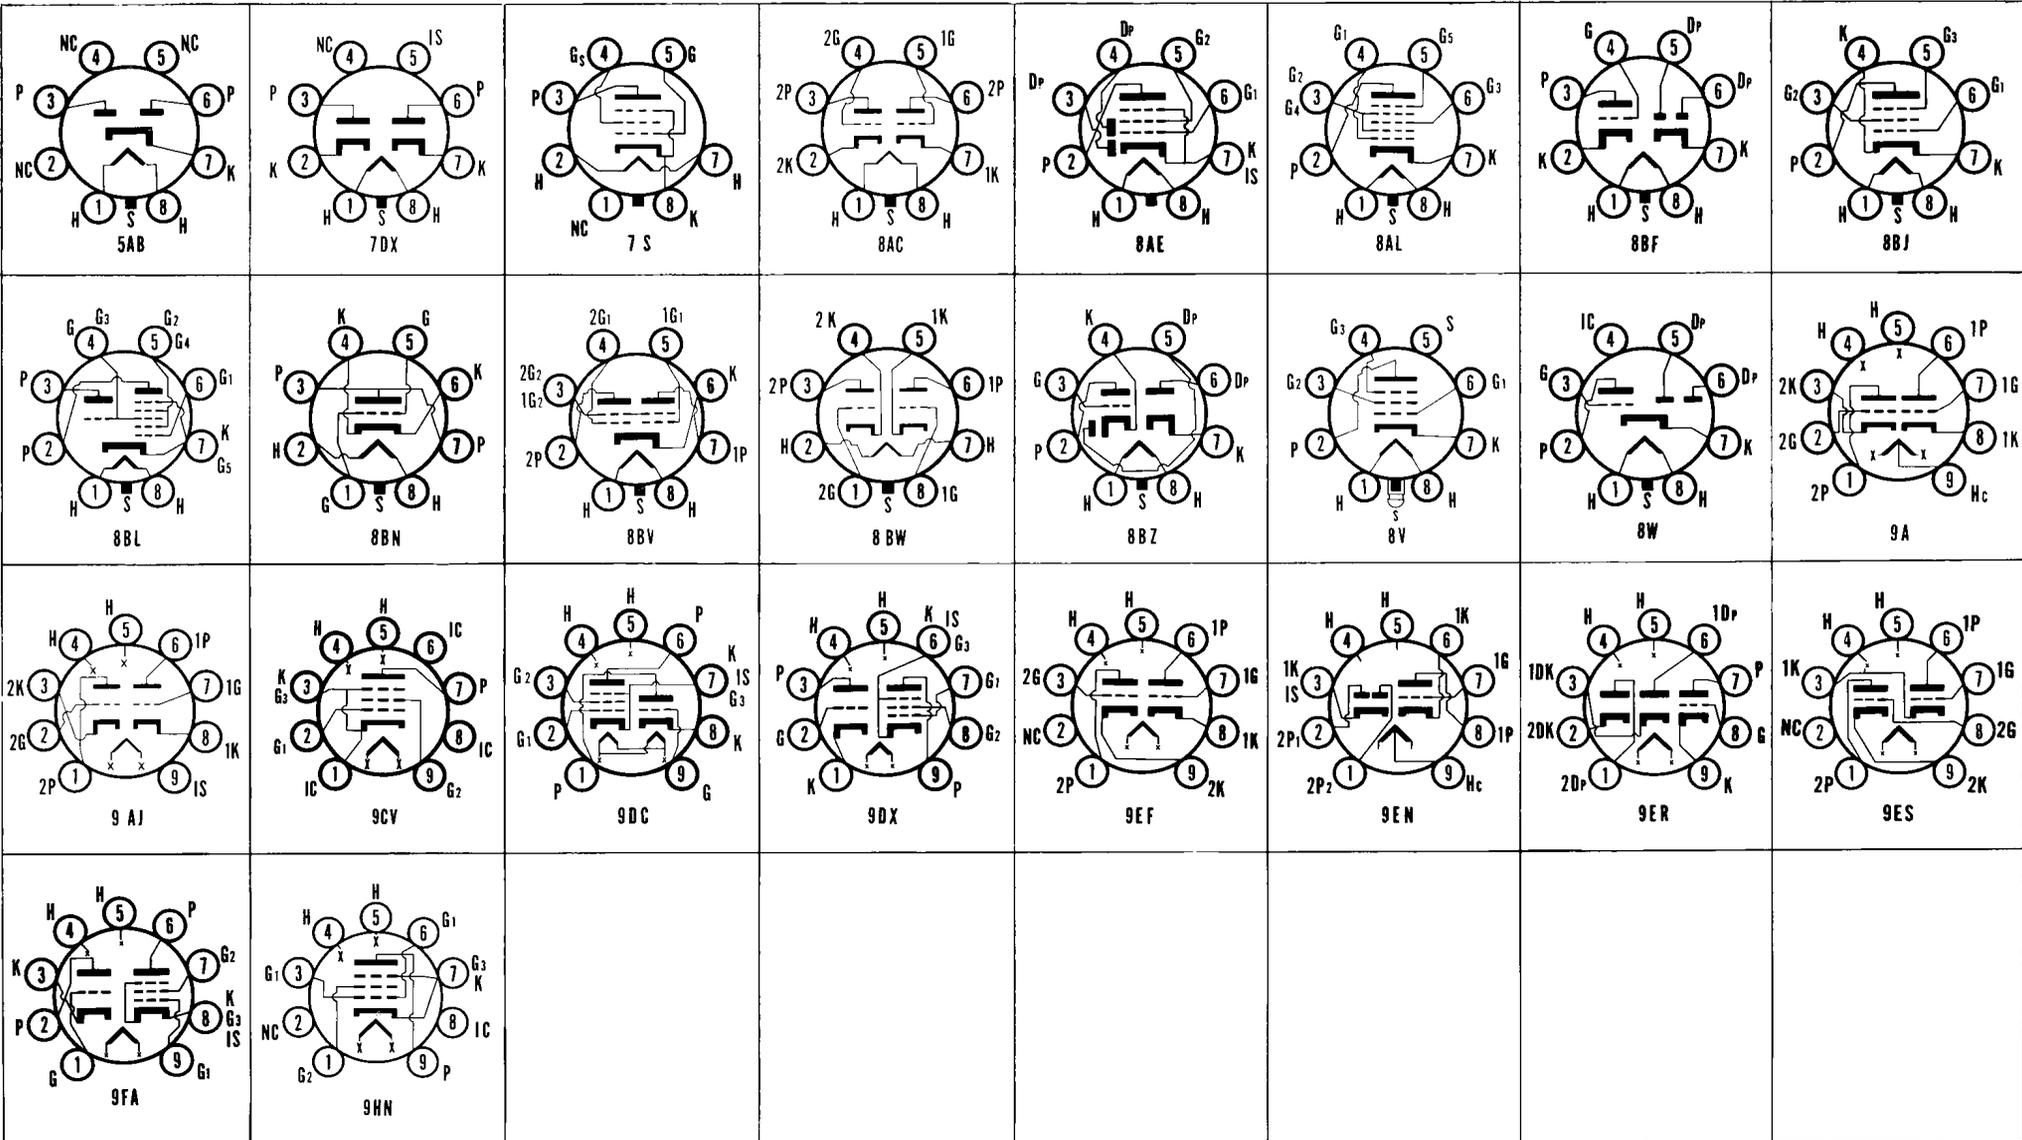

SYMBOLS FOR BASE DIAGRAMS: Dp—Diode Plate; F—Filament; Fc—Filament Center; G—Grids numbered according to their position from the cathode; H—Heater; Hc—Heater Center; Ht—Heater Tap; IC—Internal Connection, DO NOT USE, J—Jumper; K—Cathode; NC—No Connection; P—Plate; Rc—Ray Control; S—Metal Shell; SA—Starter Anode; T—Target; XS—External Shield; □—Top Cap; ■—Locating Key.

(1) Values are given shielded unless marked with (\*). (2) Converter tube capacitances given are signal grid to plate; RF Input, Mixer Output.  
 (3) Has special mechanical and/or life characteristics. (4) Average Contact potential bias developed across specified grid resistor.  
 † Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

‡ Per Tube or Section.  
 § Plate and Target Supply Voltage.  
 † Maximum Signal.

□ Applied through 20,000 ohms.  
 ▲ Conversion Transconductance.  
 \*\* Triode Operation.

‡ Plate to Plate.  
 † Approximate.

m maximum.  
 ■ Cathode Resistor (ohms).

SYMBOLS FOR BASE DIAGRAMS: Dp—Diode Plate; F—Filament; Fc—Filament Center; G—Grids numbered according to their position from the cathode; H—Heater; Hc—Heater Center; Ht—Heater Tap; IC—Internal Connection. DO NOT USE, J—Jumper; K—Cathode; NC—No Connection; P—Plate; Rc—Ray Control; S—Metal Shell; SA—Starter Anode; T—Target; XS—External Shield; □—Top Cap; ■—Locating Key.

(1) Values are given shielded unless marked with (\*). (3) Has special mechanical and/or life characteristics.  
 (2) Converter tube capacitances given are signal grid to plate; RF Input, Mixer Output. (4) Average Contact potential bias developed across specified grid resistor.  
 † Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

# Per Tube or Section.  
 § Plate and Target Supply Voltage.  
 † Maximum Signal.

□ Applied through 20,000 ohms.  
 ▲ Conversion Transconductance.  
 \*\* Triode Operation.

† Plate to Plate.  
 † Approximate.

m maximum.  
 ■ Cathode Resistor (ohms).

(1) Values are given shielded unless marked with (\*). (2) Converter tube capacitances given are signal grid to plate, RF Input, Mixer Output. (3) Has special mechanical and/or life characteristics. (4) Average Contact potential bias developed across specified grid resistor. (5) Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

# Per Tube or Section. § Plate and Target Supply Voltage. † Maximum Signal. □ Applied through 20,000 ohms. ▲ Conversion Transconductance. \*\* Triode Operation. ¶ Plate to Plate. †† Approximate. m maximum. m Cathode Resistor (ohms).

SYMBOLS FOR BASE DIAGRAMS: Dp—Diode Plate; F—Filament; Fc—Filament Center; G—Grids numbered according to their position from the cathode; H—Heater; Hc—Heater Center; Ht—Heater Tap; IC—Internal Connection, DO NOT USE, J—Jumper; K—Cathode; NC—No Connection; P—Plate; Rc—Ray Control; S—Metal Shell; SA—Starter Anode; T—Target; XS—External Shield; □—Top Cap; ■—Locating Key.

(1) Values are given shielded unless marked with (\*). (3) Has special mechanical and/or life characteristics.  
 (2) Converter tube capacitances given are signal grid to plate, RF input, Mixer Output.  
 (4) Average contact potential bias developed across specified grid resistor.  
 † Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

# Per Tube or Section.  
 § Plate and Target Supply Voltage.  
 † Maximum Signal.

□ Applied through 20,000 ohms.  
 ▲ Conversion Transconductance.  
 \*\* Triode Operation.

‡ Plate to Plate.  
 † Approximate.

m maximum.  
 □ Cathode Resistor (ohms).

(1) Values are given shielded unless marked with (\*). (2) Converter tube capacitances given are signal grid to plate, RF input, Mixer Output. X Controlled Heater Warm-up Time (applies to parallel connections of types having a tapped heater.)

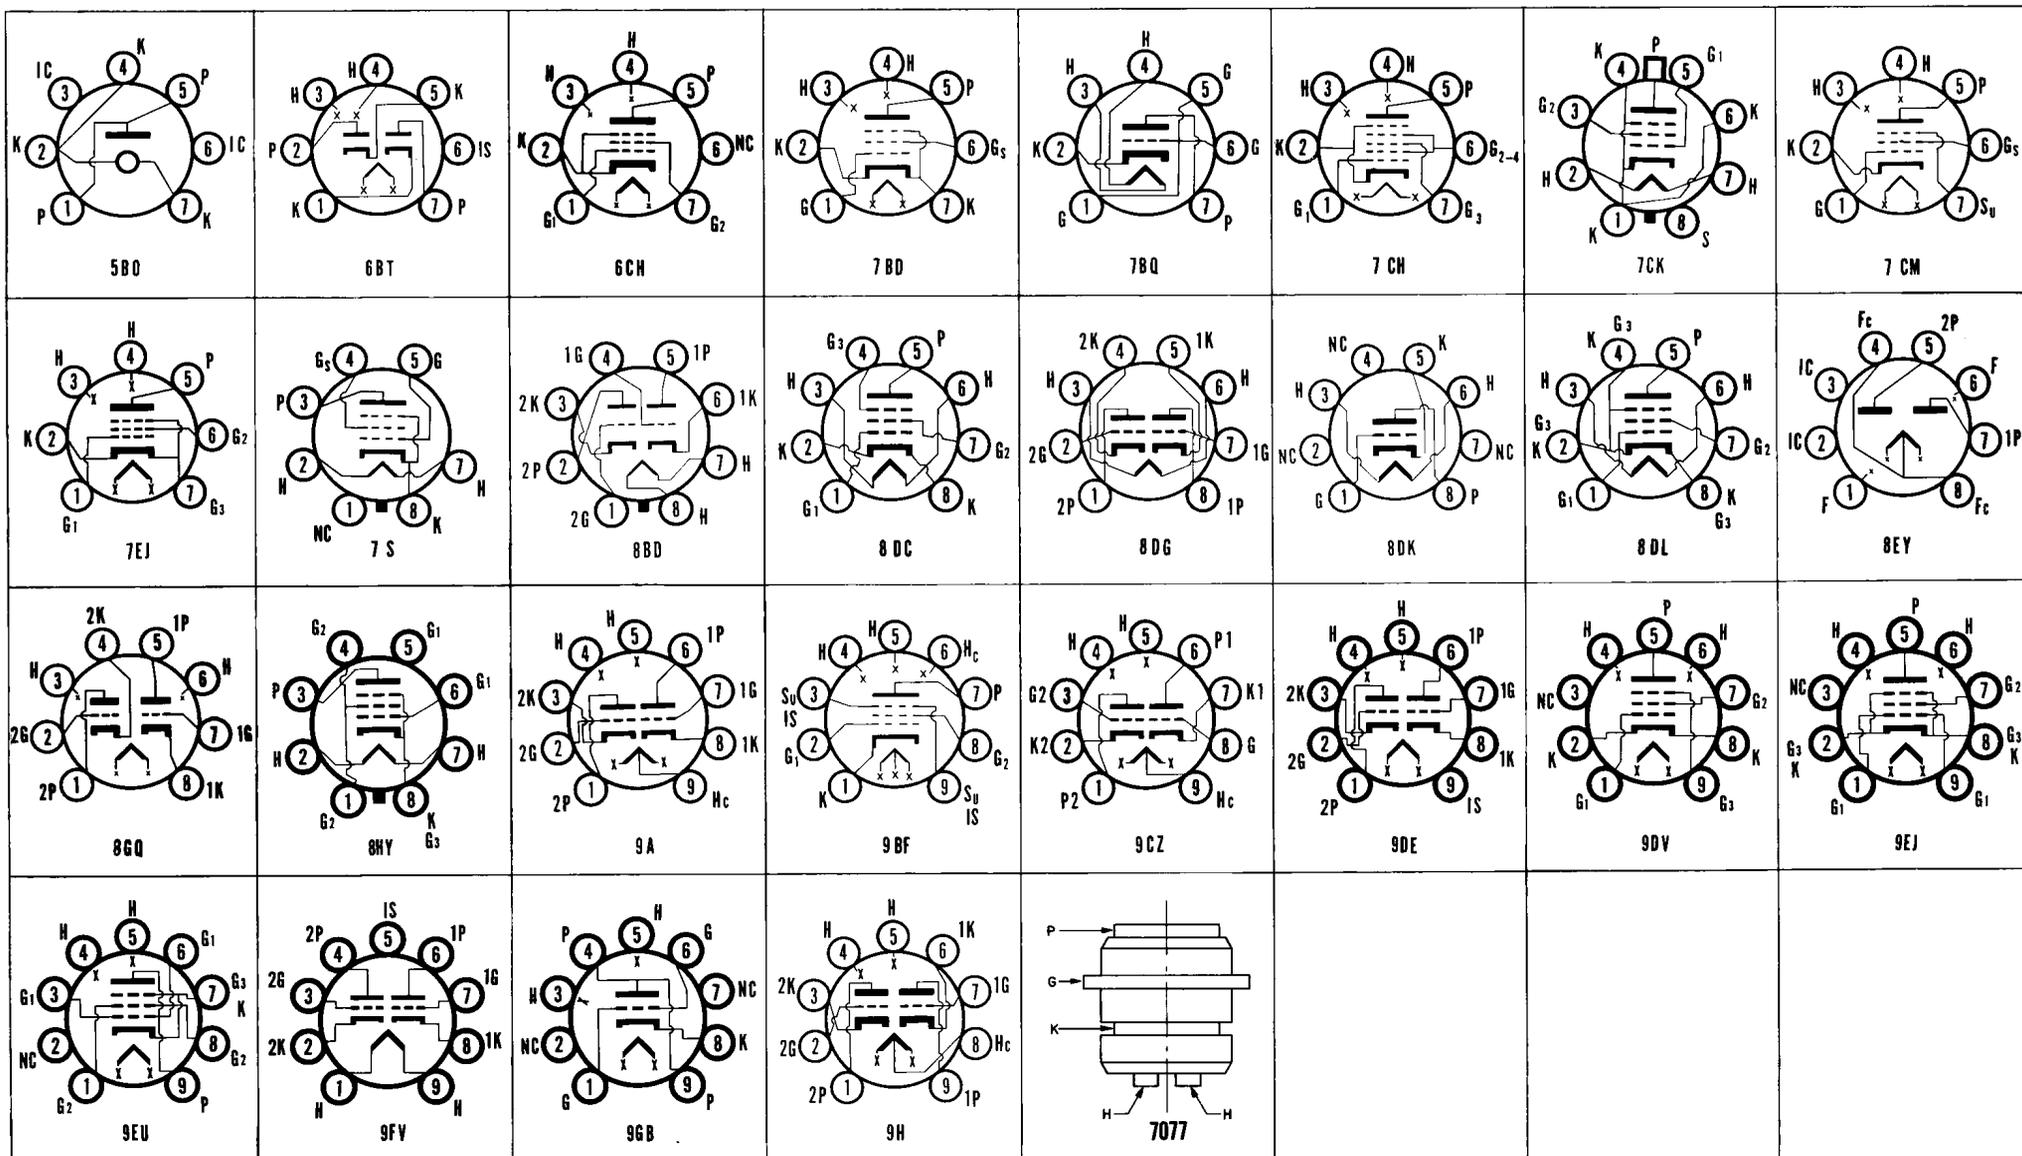

(3) Has special mechanical and/or life characteristics. (4) Average Contact potential bias developed across specified grid resistor.

Per Tube or Section. Plate and Target Supply Voltage. Maximum Signal.

Applied through 20,000 ohms. Conversion Transconductance. Triode Operation.

Plate to Plate. Approximate.

m maximum. Cathode Resistor (ohms).

# Technical Literature

**TUBE CHARACTERISTICS BOOKLET**  
TELEVISION TUBES

Complete information on characteristics of all types of Sylvania tubes, including tube base diagrams and helpful suggestions.

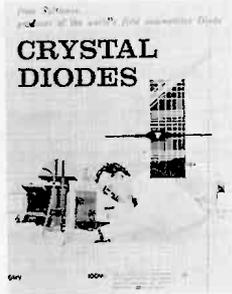

Order No. 216 15¢

**HOW TO BUILD TRANSISTORIZED TEST EQUIPMENT**

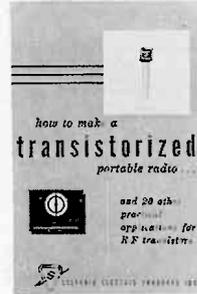

High fidelity components, photography light meter, automobile tachometer, burglar alarm, transistorized organ and metronome.

Order No. NH66 35¢

**GERMANIUM CRYSTAL DIODES**

Order No. NH29  
FREE

**HOW TO MAKE A TRANSISTORIZED PORTABLE RADIO**

Make your own transistorized portable radio—and twenty other practical applications for R-F transistors.

Order No. 222 35¢

Published by Sylvania and constantly revised to keep you informed about the most recent electronic developments.

**TECHNICAL MANUAL**

Complete data, in convenient forms, on Sylvania tubes. Ring binder permits easy insertion of new data sheets which are mailed as released at no additional cost.

Order No. 202 \$2.50  
Additional binders—75¢

**TECHNICAL SECTIONS**

Contain all issues of Technical Sections of Sylvania News. Vol. 1 (1935 to 1940 incl.), Vol. 2 (1941 to 1945 incl.), Vol. 3 (1946 to 1949 incl.), Vol. 4 (1950 to 1953 incl.), Vol. 5 (1954 to date).

Order No. 220 \$1 per vol.  
(Indicate Volume No.)

**JUNCTION TRANSISTORS**

This booklet of practical transistor circuits has been accumulated from tests of many devices. Serves as manual of applications and circuits for service dealers—28 uses for junction transistors.

Order No. 237 35¢

**MICROWAVE DIODE HANDBOOK**

This is a new handbook for the engineers—includes many new uses of diodes.

Order No. 230 50¢

**Order now**

from your Sylvania distributor

or write to

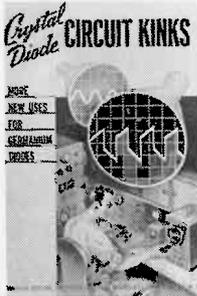

**Sylvania  
Central Advertising  
Distribution Dept.**

1100 Main Street  
Buffalo 9, N. Y.

**40 USES FOR GERMANIUM DIODES**

Order No. 240 35¢

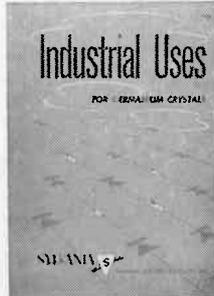

**CRYSTAL DIODE CIRCUIT KINKS**

Order No. 239 35¢

**ELECTRONIC SHORTCUTS FOR HOBBYISTS**

Order No. 241 35¢

**INDUSTRIAL USES FOR GERMANIUM CRYSTALS**

Order No. 242 35¢

**SYLVANIA  
ELECTRIC PRODUCTS INC.**  
1740 BROADWAY
